

# Wooden / Concrete bridge

The wooden/concrete bridge is intended for calmer locations. It's manufactured in desired lengths and can be lengthened without any visible lengthening-pieces.

The construction consists of a wooden superstructure of pressure-cresoted wood mounted on floats of reinforced concrete with cellular plastic core, which makes the bridge unsinkable.

Ready for electric and water installation.

## Specifications

### Type 31 / Type 32

Minimal length	8 m / 8 m
Width	2,4 / 2,4
Free board height	0,6 m / 0,45 m
Weight	420 kg/m / 365 kg/m
Concrete	C32/40 S5 16, LP 0,43, 6,0% air
Reinforcement	Nps 50, steel fiber
Bearing rail Decking	75x150 mm reinforced 38x150 mm reinforced
Vertical lever flush-bolts	38x200 mm reinforced
Horizontal lever flush-bolts	38x150 mm reinforced

We reserve the right to make changes.
